
Games Sales Insights

OVERALL PERFORMANCE (All Years)

- Total Sales: ₹22,97,354 | Net Revenue: ₹19,74,763 | Profit: ₹2,86,347
- Profit Margin: 14.50% | Total Orders: 5,009 | Quantity: 37,873
- COGS: ₹16,88,416 — consuming 85.5% of Net Revenue, leaving very thin headroom

---

SALES TREND & DROP ANALYSIS

- Sales grew steadily through 2019, peaking at ₹2,67,349 in Q4 2019
- A massive 58.03% drop occurred from 2019 to the trough — the steepest decline in the entire dataset
- A marginal recovery of just 1.18% was recorded — effectively flat, signalling the business has not bounced back
- The moving average line (orange) confirms the downward trend is structural, not seasonal
- 2022 Q4 at ₹34,248 is the lowest quarter recorded — the business is at its weakest point

---

SALES BY PRODUCTS

- Mouse (₹3,30,047) and Nintendo (₹3,28,454) are the top revenue drivers
- Accessories as a category leads with the best profit margin at 17.39%
- PS5 and XBox are loss-making despite significant sales volume — pricing strategy needs urgent review
- Puzzle (₹2,23,862) and Fantasy are the strongest Games sub-categories
- Action (₹1,07,538) is visible in the chart — moderate performer worth nurturing

---

SALES BY REGION

- West (₹7,25,514) and East (₹6,78,834) dominate, contributing 61% of total sales
- Central (₹5,01,256) generates decent revenue but has the weakest margin at 7.92%
- South (₹3,91,750) is the smallest region — underpenetrated and has growth potential
- Regional diversification strategy needed — over-reliance on West and East is a business risk

---

SHIP STATUS

- Shipped Early: 4,909 — largest bucket but early shipping inflates logistics costs unnecessarily
- Shipped Late: 2,638 — 26% of orders are late, a direct risk to customer satisfaction
- Shipped On Time: 2,447 — fewer orders are on time than late, which is operationally unacceptable
- Shipping process needs a complete overhaul — only 1 in 4 orders ships exactly as scheduled

---

HIGH VALUE CUSTOMERS

- Sean Miller (₹25,042) is the top spender but is loss-making — excessive discounts likely
- Tamara Chand (₹19,050) is the most profitable top customer — should be prioritised for retention
- Adrian Barton (10 orders) and Ken Lonsdale (12 orders) are the most frequent buyers — loyalty programme candidates
- Customer-level profitability audit is critical — high revenue does not equal high value

CITIES IN LOSS

- Philadelphia is the worst loss city — largest red bar on the chart by a significant margin
- Houston, Chicago, Jacksonville, San Antonio, Dallas all in loss territory
- Charlotte, Burlington, Louisville — smaller cities also consistently loss-making
- Loss cities span multiple regions, suggesting the issue is discount policy and pricing, not just regional logistics
